Empowering doctors and protecting patients in a mobile world

Agent+ partnered with IDENTOS to build an app that lets doctors bill from their phone while keeping patient data secure

The app was created as a solution to the problem that founding doctors Jeremy Theal and Joyce Lee faced daily: the frustrating, time consuming administrative work required to process and collect their pay.

Agent+ was built to allow Ontario doctors to submit their billing to the Ministry of Health quickly, straight from their phone. With built-in security, and mobile-focused workflows, Agent+ helps mobile doctors work faster, smarter and safer than ever before.

KEEPING SENSITVE DATA SECURE

Powering this innovative app is the IDENTOS security platform, that ensures patient information is always secure, and doctor's payment information remains private.
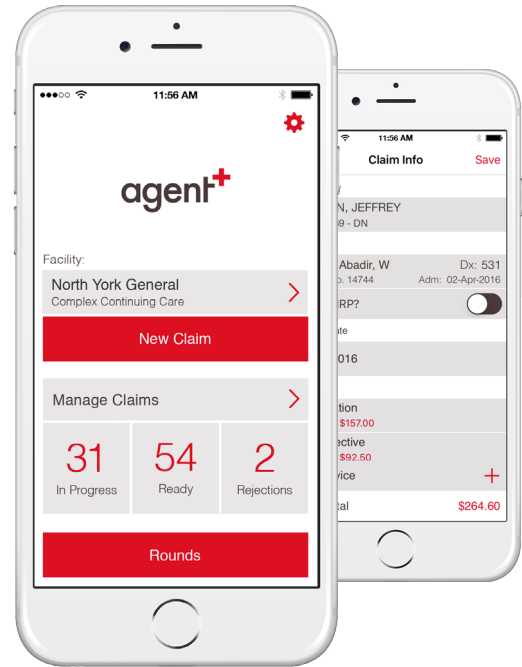

☑ **Data Encryption**
The most essential security feature ensures that patient information is always private, even in the event of a hack

☑ **Remote Wipe of Lost Devices**
Remove sensitive data from lost or compromised devices and apps to eliminate potential privacy breaches

☑ **Two-factor Authentication**
Agent+ enforces in-app PIN verification to provide an extra level of security for sensitive patient information

☑ **Compliance Management**
Blockchain-ready logging and auditing of data helps Agent+ meet HIPAA and PHIPA requirements

☑ **Offline Usage**
Securing devices and setting offline policies allows Agent+ users to continue working despite spotty coverage

"The app has made such a difference in my daily workflow. The ability to get the work done in offline mode has been critical and enables me to bill from anywhere in the hospital — that was never possible before."

– Jeremy Theal, MD
